

Coding Quiz I - DI04 - What to do!

- Complete the implementation of the **insert** method of the **SomeList** ADT class
- Before we do so, let's have a look at the code we have been given:
 - **Makefile** is ready to be used (no modification required)
 - **Node** class is ready to be used (no modification required)
 - **SomeList_Test_Driver.cpp** is ready to be used (no modification required)
 - **SomeList.h** is ready to be used (no modification required)
- Make sure we read SomeList's public interface
- Make sure we know what underlying data structure it uses

Coding Quiz I - DI04- What to do!

- Let's not concern ourselves with duplicated data
- Incrementally develop **insert**
 - For example
 1. Insert into an empty data collection
 2. Insert into a data collection that already contains one element
 3. Insert into a data collection that already contains several elements
- Compile, execute and submit to CourSys frequently
- **Submit only SomeList.cpp**
 - The CourSys activity to which we need to submit our file is called **Coding Quiz I - DI04**
- Good luck!
